What's New

For an overview of the new features and enhancements in Geobank 2021.5 (version 11.2), click on the following links:

New Features

Automation

Job Scheduler

A new Geobank component, Automation, provides a job scheduler that allows jobs to run unattended.

The following types of Geobank jobs/tasks have the functionality to run in *Unattended mode*;

- Graphic Reports
- Advanced Reports
- Configured Imports
- Configured Exports
- Excel Imports
- Forms
- Action Queries
- Query Groups
- Macros (containing the objects above)

When in unattended mode, the above automatically start, log errors instead of displaying errors, and automatically close when complete.

The recommended approach is that Geobank is installed on an application server for running scheduled/unattended jobs. The server does not require a display: If there is no display, Geobank will simply run in the background. If there is a connected display, Geobank will run visibly but will not take focus or require any attention.

Note: Geobank must have access to a licence to run unattended - either a seat on a network licence or a standalone licence on the computer on which Geobank is being run unattended (usually a server).

Apps

Logging Integrator

A new Logging Integrator Geobank App is available for Annual Licence Members. This is to create new logging profiles in Geobank Mobile which are based on Geobank but can have a different arrangement suited to data collection. Lookups, planned collars and samples can then be transferred from Geobank to the Loggers and completed logs retrieved and brought back into Geobank.

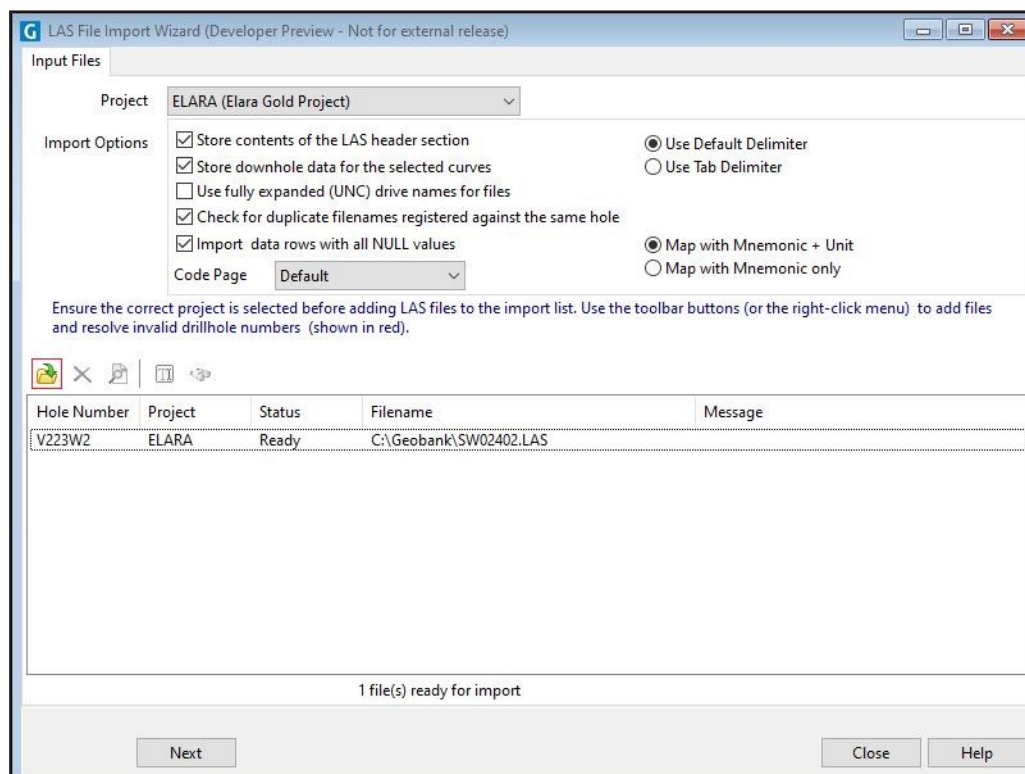

Enhancements

Imports & Exports

LAS Import Mnemonic Mapping

The LAS Import Wizard now has an option to use a two-part curve code (Mnemonic+ Unit) instead of just Mnemonic. This allows the mappings to be more specific with less frequent need for change.

Note: The new two-part mapping code option does not affect the mappings for or the functionality of the existing Mnemonic-only mapping option which is still available.

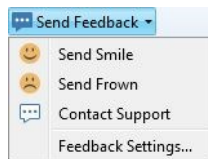

Options

Feedback

On the right-hand side of the application menu bar, you can now click **Feedback** to provide positive or negative feedback on your user experience of Geobank, make a suggestion, or request support.

The same options are available on the Home ribbon. When you click on **Feedback Settings** you can choose whether to opt out of the Geobank User Experience Improvement Program. Note that your participation in the program will help improve the usability, performance and overall quality of Geobank.

Licence Reminder

On the *Licensing* page of the Options dialog, you can now specify the number of days, prior to the expiry date of your active licence, at which to show a maintenance agreement expiry warning. The default number of days prior is 30 days.
